

Project Evaluation Form

Mandatory assessment: max 100 points • Bonus: up to +20 points (overall max 120)

Project title	Freelance Job Board	Team / members	5 / Luka Šegović, Maksym Kotsiubailo
Deployment URL (spider.foi.hr)		Repository / source-code link	Link
Evaluator	Luka and Maksym	Date	21.1.2026.
Notes (optional)			

Gating checklist :

Requirement	Met (Y/N)	Negative points	Notes
Deployed and runnable on spider.foi.hr	Y	-20	Was tested.
Authentication not present; passwords stored securely (not plain text)	Y	-10	Passwords are stored securely.
Role-based authorization enforced on backend API	Y	-10	

Mandatory assessment (max 100 points)

Area	Criterion	Max	Points	Notes / evidence
System Design & Documentation 15 points (minimum required 5 points)	Architecture (frontend/backend/db + integration points)	5	4	Submitted on ELF.
	Data model / ERD + relationships + constraints	3	3	Submitted on ELF.
	Roles & business rules (incl. 2 regular user types)	3	3	Already submitted
	API documentation (endpoints, auth, errors, examples)	4	4	Submitted on ELF.
Backend Implementation 35 points (minimum required 5 points)	Core entities & CRUD (Users, Categories, Main entities + status history)	15	15	Heavily tested and everything works.
	Business rules enforced server-side (per roles/types)	7	6	
	Data integrity & validation (mandatory, unique, FK, invalid data blocked)	5	5	Everything is checked when trying to enter invalid data.
	Security & access control (auth, confirmations, secure passwords)	5	4	More secure passwords during registration needed.
	Error handling + audit logging (who/when for critical actions)	3	3	Errors are written in console and displayed if the user encounters them.

Frontend Implementation (Angular) 35 points (minimum required 5 points)	Role-based UI aligned with backend capabilities	10	10	Different roles have different UI.
	Usability, responsiveness, clear error messages	8	8	Everything is as it should be.
	Server-side handling of large data + filtering + sorting	6	6	Everything is server-side.
	Chart in at least one place about bussines data (not system data e.g. logging)	4	4	On admin panel, only administrators and managers can see it.
	Angular code quality & standards (services/guards/interceptors)	4	3	Everything works as intended.
	Integration stability (consistent API use, auth state handling)	3	3	
Presentation / Demo (mandatory)	Clarity & structure	7	6	Application is well designed.
	Functionality demonstrated (end-to-end scenarios)	8	6	
TOTAL (mandatory)		100		

Bonus (up to +20 points; total bonus capped at 20)

Bonus features (max 10 points each)	Evidence (where/how)	Points	Notes
JWT (access/refresh) or robust session handling (incl. CSRF where applicable)	authController.ts	2	
PDF report export (e.g., categories, tasks, audit trail)			
CAPTCHA / rate limiting / brute-force protection	Login page.	2	User gets 3 chances to login, if the email/password is incorrect, the user is blocked on 5 minutes (changable)
TOTP / 2FA			
XSS hardening (sanitization, CSP basics)			
Other relevant, well-integrated improvement (specify) not mentioned previously	Lazy loading, Password shower	3	Implemented for most pages. It prevents overloading of server by not loading pages that are not being used. Password shower on login page
TOTAL (bonus)		7	

Final score summary

Component	Max	Awarded	Notes
Mandatory	100	93	
Bonus (capped)	20	7	
Negative points	-40	0	
TOTAL	100	100
